**Tank Q, Ltd. Announces Simple, Low Cost, Line-of-Sight LP Monitor to Alert Customers
It's Time to Refill**

Port Clinton, OH, March 9th, 2009

Ohio man invents the first line-of-sight LP tank monitor. Coupled with a remote-ready LP tank dial, this monitor will alert customers when their tanks reach the 25% level (+/- 5%). The device, which is viewable from all angles, flashes to indicate that the tank needs attention, alerting the owner and possibly neighbors.

Prior to the release of this product, other LP monitoring systems were available, but usually require monthly fees, and only notify the LP dealer and/or the owner of the tank. "This new device is available to aid customers in reminding them to call their LP dealer, and it will also enable the LP dealer to schedule deliveries more efficiently," says Chris Clabaugh inventor.

Please contact your local LP distributor to install your TankQ.

For additional information on the new line-of-sight LP monitor, contact Tank Q:
